Problems

Many parents today struggle with managing their children's screen time.

They're worried about:

Late-night device usage

Exposure to harmful or inappropriate content

Lack of family time and healthy routines

Solutions

We created Ra'i, a mobile application that empowers parents to manage screen time while encouraging positive behavior.

Custom Profiles: Different rules for weekdays, weekends, and individual kids.

Usage Reports: See what apps are being used and for how long.

Smart Scheduling: Lock screens during key times like bedtime, school, or prayer.

Target users

This product is ideal for busy parents who want simple, flexible control over their children's screen time. It's especially suited for families with kids aged 7 to 16, and for tech-aware households that value maintaining a healthy balance between screen use and real-life experiences. It also appeals to concerned caregivers who want to protect their children in a supportive way, without constant confrontation or conflict.

Prototype

We designed our prototype in Figma with two user roles: Parent and Child.

Main features include:

- Add or remove child accounts
- Set schedules by day and time
- Lock/unlock devices manually or automatically
- View detailed activity reports
- Manage tasks and rewards system

➤ go

Summary of the usability testing results

(Tasks)

- 1- Create a parent account (Sign Up)
- 2- Add/Delete a child
- 3- Edit/Add a scheduled lock
- 4- View Today and Yesterday Report
- 5- Delete your account

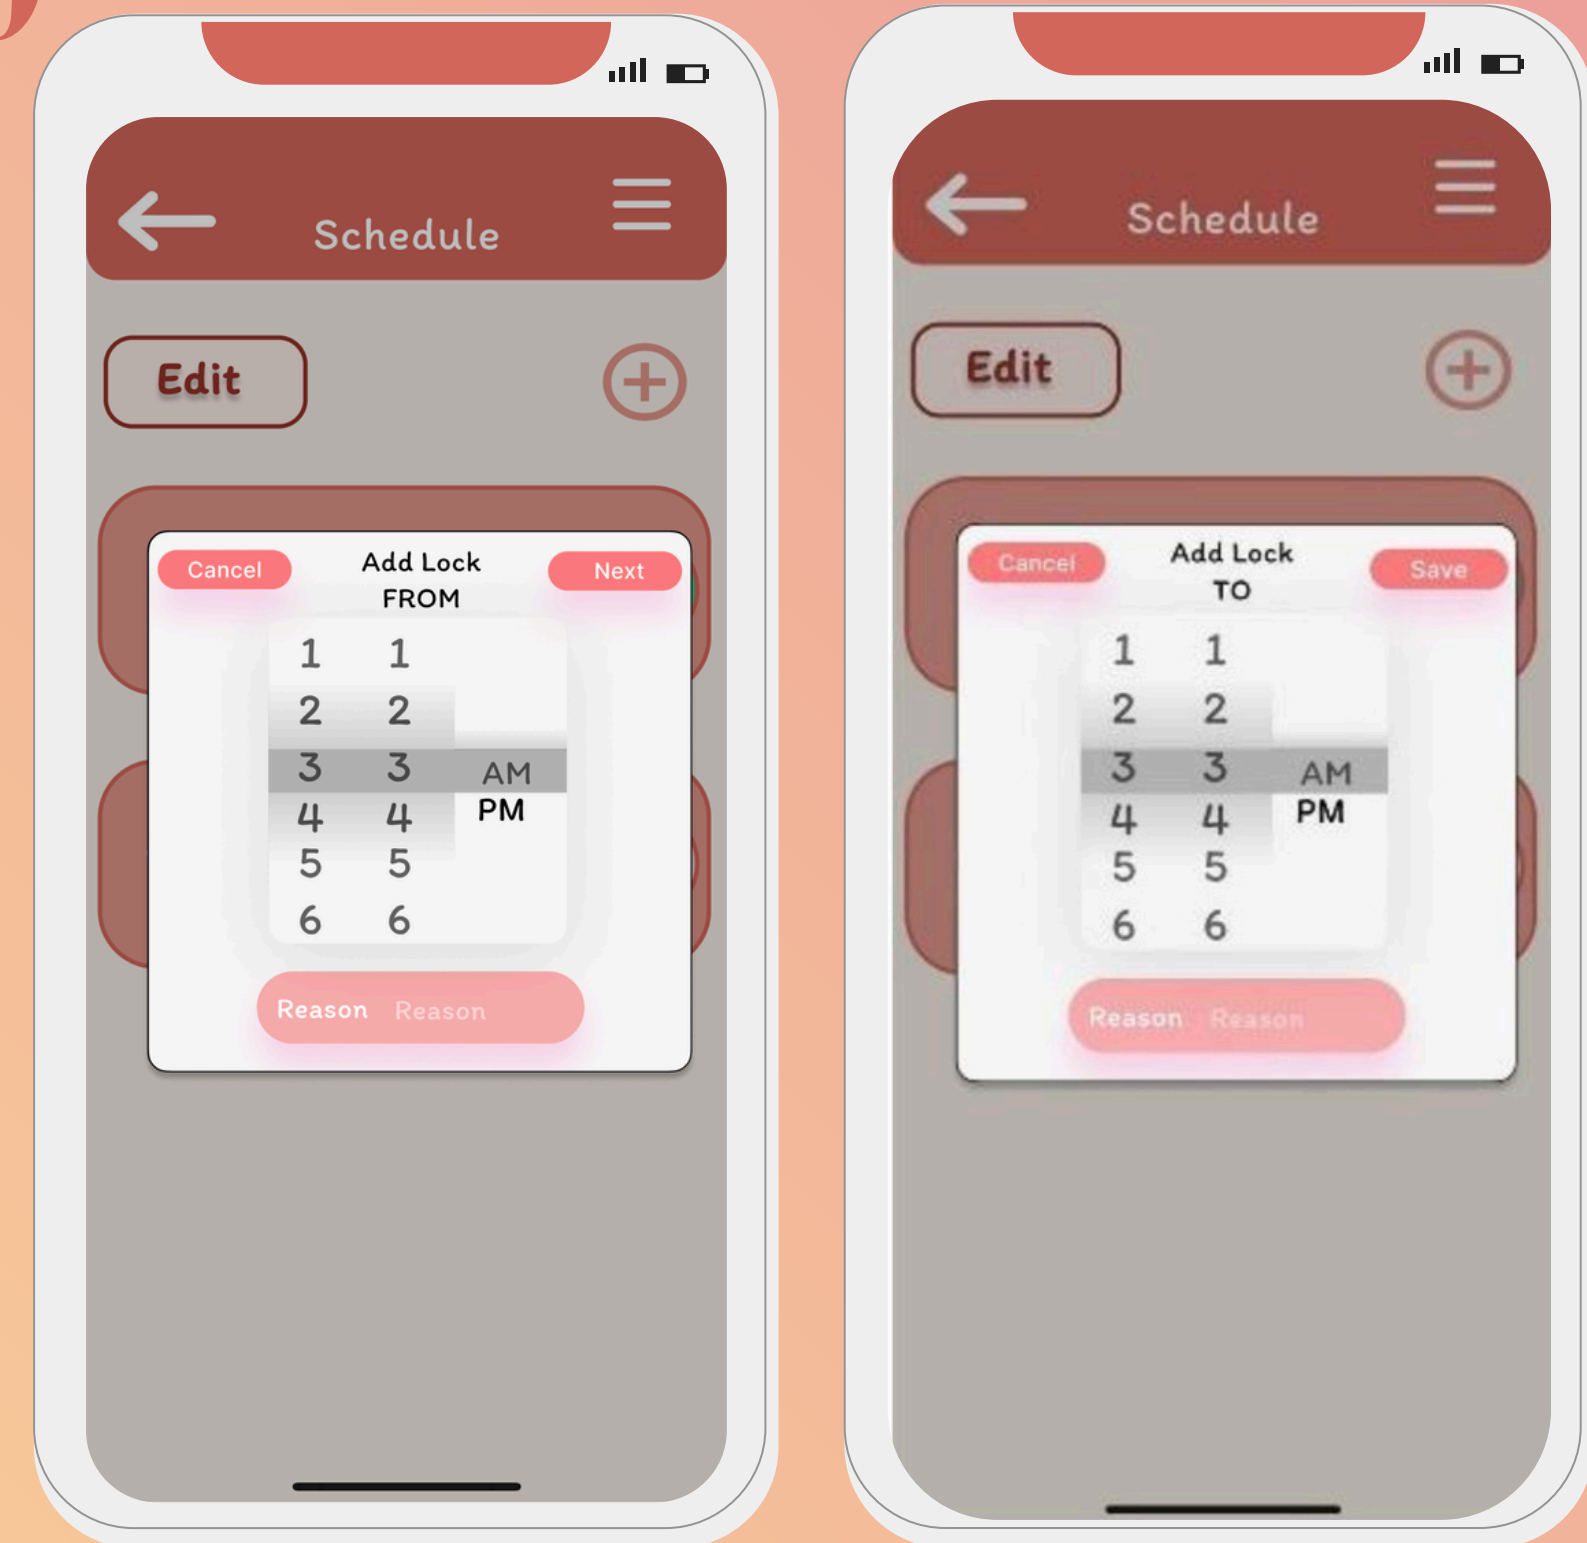

Summary of the usability testing results

(Errors)

Errors:

- Task 3 had 1 critical error (confusion with “From/To” time).

Summary of the usability testing results

(Errors)

Errors:

- Task 2 and 5 had non-critical errors (small delete icon, users searched in wrong section).

Summary of the usability testing results

(Data)

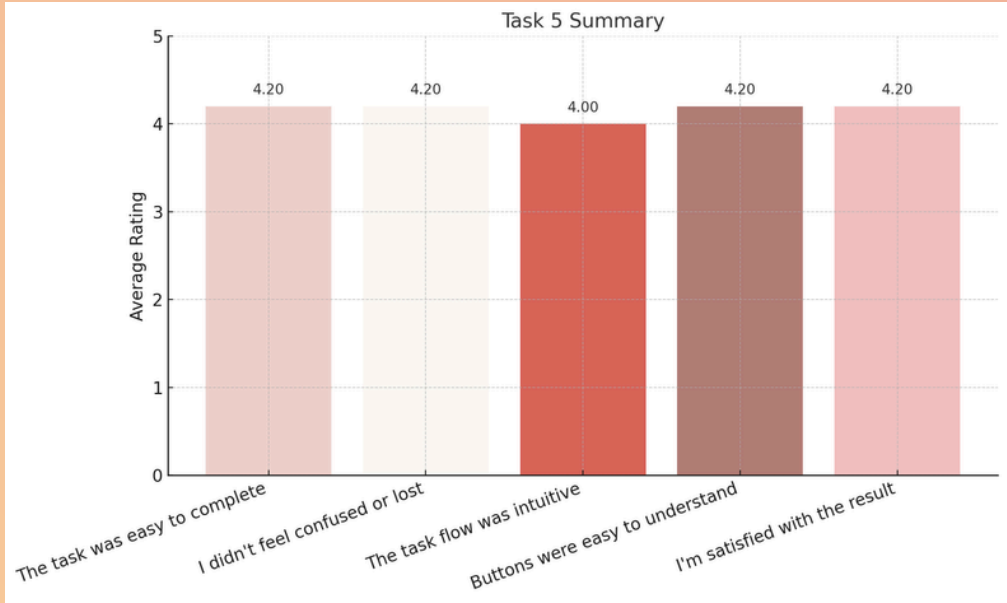

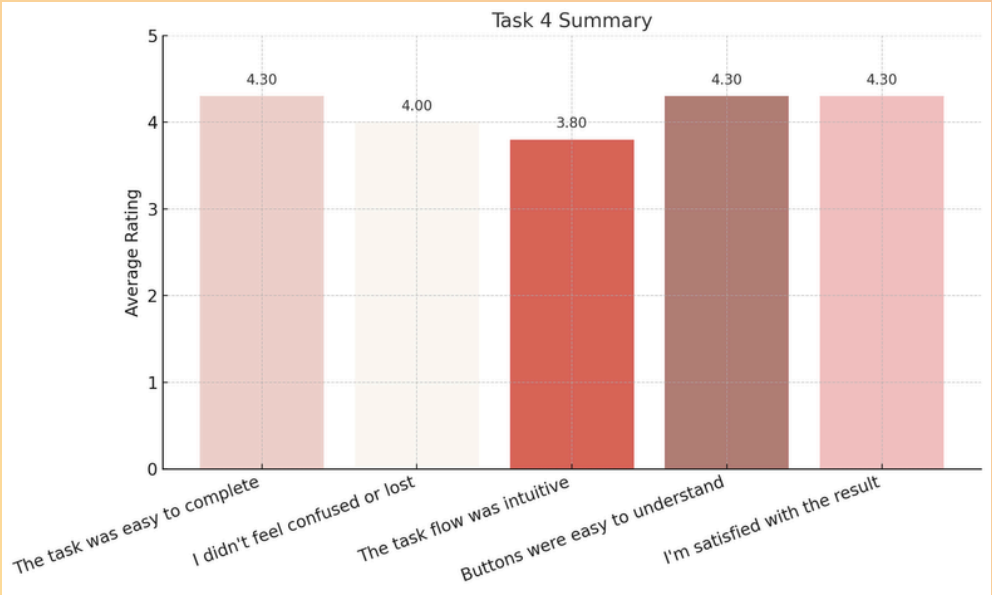

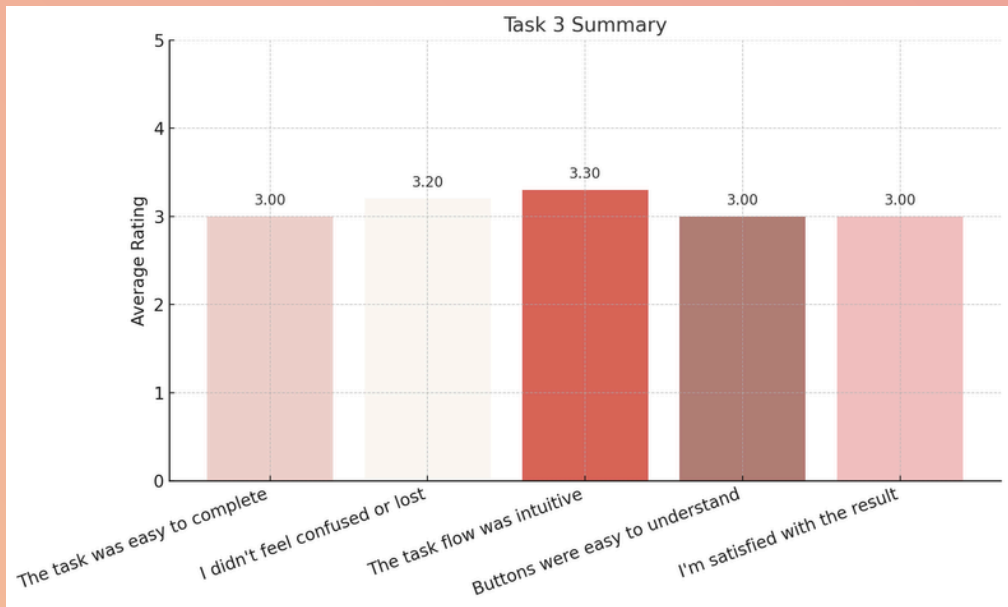

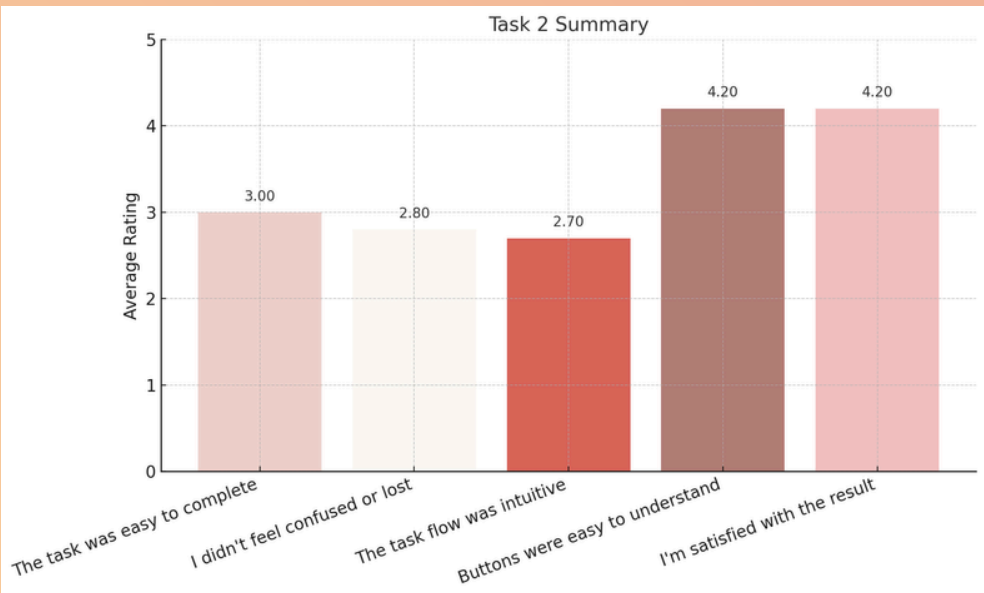

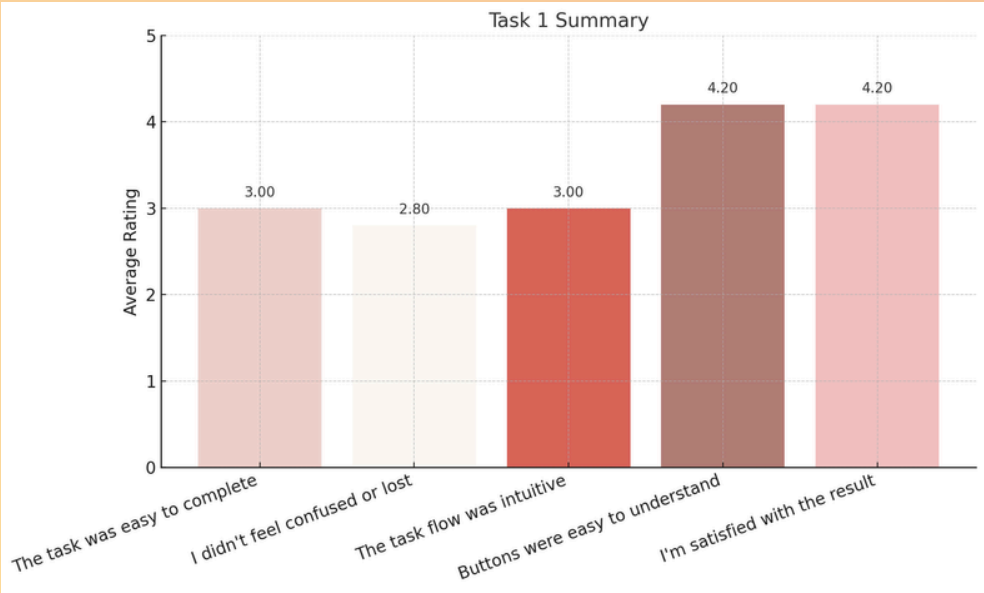

Summary of Completion, Errors, Time on Task, Average Satisfaction

Task	Task Completion	Errors	Time on Task	Satisfaction*
1	6	0	96s	4
2	6	1	36s	3.97
3	5	2	117.4s	3.27
4	6	0	42.5s	4.53
5	6	1	33.5s	4.07

Satisfaction = Average you got from the questionnaire for each task

Summary of the usability testing results

(Questionnaire)

Rating Scale

Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
----------------	-------	---------	----------	-------------------

Findings

Usability testing highlighted key areas for improvement to enhance the user experience:

- Time Selection Issue: Users struggled with setting time accurately; clearer controls are needed.
- Unclear Deletion Feature: Some users couldn't find the delete option easily; icon visibility needs improvement.
- Positive Feedback on Design: Participants liked the layout, scheduling, and reward features.
- High Satisfaction on Task 4: Indicates strength in intuitive navigation in that part of the prototype.

Recommendations

Usability testing highlighted key areas for improvement to enhance the user experience:

- Merge the “Start Time” and “End Time” pickers into one screen with a short instruction to guide users.
 - Disable the “Save” button until both times are selected to reduce scheduling errors.
 - Move or duplicate the “Delete Account” option under Settings to meet user expectations.
 - Increase the size and visibility of the delete icon to make it easier to find.

Thank you

we wish you a great experience with Rai!
